ON-SITE *LEGIONELLA* DNA TEST RESULTS IN ONE HOUR

Prevents Outbreaks with
Early Detection

PACE *LEGIONELLA* DETECTION SERVICES

Our portable *Legionella* testing services utilizes a technology based on a highly accurate Nobel Prize winning chemistry called quantitative polymerase chain reaction (qPCR) and is designed to meet ISO technical standards, developed by Spartan Biosciences.

On-site rapid DNA testing can help with your *Legionella* Risk Management plan and eliminate lengthy culture testing delays with third-party labs, thereby detecting *Legionella* bacteria ahead of an outbreak of the disease.

Consult with your PACE Technical Representative to include on-site DNA testing with your water treatment program.

Fast and Accurate *Legionella* Detection

qPCR technology quantifies the actual amount of live *Legionella pneumophila* bacteria in 45 minutes.

Multiple Applications

Can analyze water samples from cooling towers, fluid coolers, condensers, domestic water fixtures, fountains and more.

Risk Management Plan

Detect *Legionella* bacterial growth early and allow cleaning and decontamination of the cooling tower before *Legionella* reaches dangerous levels to human health.
