To Whom It May Concern:

Starlight has installed Parafos in 25+ properties in South Western Ontario. Parafos was installed to ensure that the cold and hot water systems within the properties are protected from hard water scale buildup and also from corrosion.

The results to-date has been excellent. Repair and maintenance costs have significantly decreased and building staff prefer Parafos over conventional salt systems since they no longer have to carry and lift heavy bags of salt.

A service representative visits our properties on a regular basis in order to ensure that the systems are operating effectively and provides us reports upon completing each visit.

Starlight will continue to install Parafos in properties that experience problems with hard water.

Sincerely,
