## PACE<sup>™</sup> REMOTELINK

*Remote Monitoring  
Services For Your  
Water System*

24/7

**Pace RemoteLink™** is a cloud-based, water treatment management service that provides essential 2-way remote access to your water treatment system controller.

**Pace RemoteLink™** is like having a second set of eyes on your water system to help identify variable and abnormal operating conditions that can occur in between regularly scheduled site visits. Examples of undetected conditions that could lead to detrimental effects to a water system include;

- Insufficient bleedoff due to faulty solenoid
- Scale formation causing higher energy costs
- Corrosion due to insufficient treatment
- Excessive water consumption or losses
- Biological fouling due to insufficient biocide

**Pace RemoteLink™** provides direct online access (cellular modem) to your water system to ensure immediate alarm response, improved operations and system protection, potentially resulting in savings on energy and water consumption, system shutdowns and less frequent personnel maintenance site visits.

### ***Process Monitoring & Control***

Anywhere access to your real-time water treatment controller data. **RemoteLink™** can monitor cooling towers, steam boilers and heating/chilled water systems.

### ***Data Management***

Assess key parameters at-a-glance, such as water consumption and losses, system conductivity, pH, ORP, treatment levels, treatment pumps and solenoid activation, and treatment inventory management.

### ***Custom Alarm Notifications***

Customize and manage alarm settings by controller channel. Alarm notifications are programmed and sent 24/7 to the Pace Service Team when they arise.
